Winston Salem, NC 27106

Dear Mr. Williams:

Per our conversation yesterday concerning the tank removal at the Altamahaw Mall. I have attached both sets of lab reports and as you can see, only one sample on each report was above the detection limit. We feel quite positive that the contaminated soil is concentrated in a small area towards the rear of the tank pit. During the excavation we did not detect any smell of gasoline and both tanks appeared in good condition. There seemed to be a heavy smell of spetic in the area during the excavation and the later hand augering. The property owner did not know where the spetic tank or lateral lines were located.

We have attached the lab reports, a site map, and other information concerning the site.

Sincerely,

Wesley C. Mehring
V. President
